

FSC

Single-Phase Solid-State Relay with LED and built-in transil

Description

The **FSC** series provides a compact solid state switching solution suited for confined spaces. Long life time is ensured by the use of assembly technology that reduces stresses on the power semiconductors.

The **FSC** series is suitable for resistive loads. The zero-cross switching type model, switches ON when the voltage crosses zero. The Random Turn-On type model switches ON when the control voltage is applied. Switch OFF occurs when current crosses zero.

Integrated transils provide protection against overvoltages. A green LED indicates presence of the control voltage. FASTON (quick connect) terminals enable fast installation. The **FSC** is provided with pre-attached thermal interface ready for mounting on chassis or heatsink.

Benefits

- **Panel space savings.** 70% space savings compared to standard hockey puck SSRs.
- **Fast installation.** Quick connect terminals for fast and easy wiring.
- **User friendly.** LED for visual indication of control status.
- **Ready for use.** Pre-attached thermal interface to backplate.
- **Low equipment downtime.** Integrated protection against over-voltages across the output.
- **Long lifetime.** Wire bonding technology reduces thermal and mechanical stresses of the output chips.
- **Food & Beverage certification conformance.** 100,000 cycle endurance test according to UL508.

Applications

- Coffee Machines
- Vending Machines
- Food Warmers
- Griddles
- Fryers
- Thermoforming Machines
- Temperature Control Units
- Plastic Dryers
- Plastic Sealing Machines
- Laboratory Oven Chambers, etc.

Main Features

- Ratings up to 280 VAC, 25 A
- DC control voltage of 5 VDC, 12 VDC, 24 VDC
- Integrated overvoltage protection on output
- Pre-attached thermal interface

Output Specification*

Operational Voltage Range, Ue	24-280 VAC
Blocking Voltage	600 Vp
Max. Operational Current: AC-51 Rating**	25 A
Operational Frequency Range	45 to 65 Hz
Power Factor	> 0.9 @ Rated Voltage
Output Protection	Integrated transil
Leakage Current @ Rated Voltage	< 3 mAAC
Minimum Operational Current	150 mA
Rep. Overload Current - UL508: T=40°C, t _{ON} =1s, t _{OFF} =9s, 50 cycles	40 A
Non-Repetitive Surge Current (t=10ms)	325 Ap
I ² t for Fusing (t=10ms), minimum	525 A ² s
LED Indication - CONTROL	Continuously ON Green LED, when control input is applied
Critical dV/dt (@Tj init = 40°C)	1000 V/μs
Endurance Testing acc. to UL508	100,000 cycles

* Specifications are stated at 25°C unless otherwise noted.

** Max. 25 AAC with suitable heatsink. Refer to Heatsink Selection tables.

Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- Performance Criteria 1 (PC1): No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2 (PC2): During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3 (PC3): Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.
