SERIES                     RELAY TYPE
GRF131                         RF Non-Latching, SPDT, Surface Mount Relay

DESCRIPTION

The ultraminiature Series GRF131 is designed to provide a practical surface-mount switching solution with RF performance and repeatability to 18GHz. The GRF131 improves on Teledyne Relays’ heritage of miniature RF relays by incorporating a precision transmission line structure in the internal construction of the contact system. GRF131 relays feature a unique ground shield to facilitate surface mounting and to extend the frequency range when compared to through-hole solutions.

These relays are designed for use in RF attenuators, RF switch matrices, high frequency spread spectrum radios, ATE, and other applications that require dependable high frequency signal fidelity and performance. The low power consumption makes the GRF131 suitable for applications where power budget is restricted.

The GRF131 features:

• High Repeatability
• Wide Bandwidth Performance
• Higher Isolation Between Each Signal Path
• Metal Enclosure for EMI Shielding
• High Isolation Between Control and Signal Paths
• High Resistance to ESD

The unique construction features and manufacturing techniques provide excellent robustness for environmental extremes and overall reliability:

• Minimum mass components and welded construction provide maximum resistance to shock and vibration
• Advanced cleaning techniques provide maximum assurance of internal cleanliness
• Gold-plated precious metal alloy contacts ensure reliable switching
• Hermetic Seal
• RoHS Compliant

GENERAL NOTES
1. Relay contacts will exhibit no chatter in excess of 10 µs or transfer in excess of 1 µs.
2. Characteristics shown as “typical” are based on available data and are best estimates. No ongoing verificatin tests are performed.
3. Unless otherwise specified, parameters are initial values.
4. Relay leads are gold plated with a typical thickness of 25-40 µin. Ground shield is gold plated with a typical thickness of 10-30µin.
5. Operate voltage at less than the specified nominal coil voltage may result in unreliable operation.
6. Relay temperature during soldering shall not exceed 250°C, and reflow temperature shall not exceed 250°C, 3 passes, 1 minute each.

RF NOTES

1. Test conditions:
   a. Fixture: .031" copper clad, gold plated, reinforced Rogers Corporation 4350B High Frequency Laminate with 2.92mm connectors.
   b. Room ambient temperature.
   c. Contact power level: 0 dBm.
   d. No. of test samples: 2.
2. Data presented herein represents typical characteristics and is not intended for use as specification limits.
3. Test fixture effect de-embedded from frequency response data.
