

# Series CCR-33S/CR-33S

Miniature DC-18 GHz/DC-22 GHz Latching SPDT Coaxial Switch

PARTNUMBER	DESCRIPTION
CCR-33S	Commercial, Latching, SPDT, DC-18 GHz Coaxial Switch
CR-33S	Elite, Latching, SPDT, DC-22 GHz Coaxial Switch

The CCR-33S/CR-33S is a broadband, SPDT, electromechanical, coaxial switch designed to switch a microwave signal from a common input to either of two outputs. This series switch is offered with a latching actuator to switch between female SMA connectors. This design is compatible with the two most common mounting hole patterns. The CCR-33S/CR-33S series is the preferred switch when compared to the competition and offers a variety of value-added options to meet the needs of each of our customers demanding applications. Whether you are working in the lab on an ATE system or need a relaible switch that can handle a Hi-Rel Space environment, Teledyne Coax Switches has a solution for you.

ENVIRONMENTAL AND PHYSICAL (	CHARACTERISTICS
Storage Temperature	–55°C to 90°C
Operating Temperature Commercial Model CCR-33S Elite Model, CR-33S CR-33S w/ indicator contacts	–25°C to 65°C –55°C to 85°C –45°C to 85°C
Vibration <sup>1</sup> , 10 ~ 2000 Hz, 300 s MIL-STD-202 Method 204, Condition C	10 G peak
Shock, Half-Sine Pulse MIL-STD-202 Method 213, Condition D	500 G peak
Moisture Resistance <sup>2</sup>	95% RH Non-condensing
Mechanical Life	5,000,000 cycles (min)
Mechanical Life w/ Additional Features	1,000,000 cycles (min)
Connector Type	SMA
Weight	1.65 oz. (46.78g) (max.)

1.	Non-op	erating

<sup>2.</sup> When moisture seal option is selected

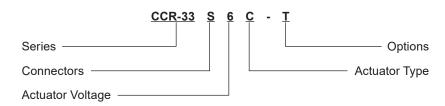

ELECTRICAL CHARACTERISTICS				
RF Contacts	Break before make			
Frequency Range CCR-33S CR-33S	DC-18 GHz DC-22 GHz			
Characteristic Impedance	50 Ω			
Switching Time	20 ms max			
Actuation Voltage (Vdc) 20°C	12 15 24 28 V			
Actuation Current (mA)	140 170 90 65 mA			
TTL/Decoders Voltage/Current <sup>1</sup> Low Level (Logic 0) High Level (Logic 1)	0.0 ~ 0.7 V / 3.2 mA Max at 0.7 V 2.4 ~ 5.5 V / 80 μA Max at 2.4 V			
Indicator Contact Rating <sup>2</sup>	30 Vdc, 50 mA max			
Magnetic Sensitivity	5 Gauss, 0.5 inch max			

- 1. For switches with TTL driver or decoder
- 2. For switches with indicator

TYPICAL PERFORMANCE CHARACTERISTICS						
Frequency	DC-3 GHz	3-6 GHz	6-12 GHz	12-18 GHz	18-22 GHz	
Insertion Loss (max)	0.2 dB	0.2 dB	0.4 dB	0.5 dB	0.6 dB	
Isolation (min)	70 dB	70 dB	60 dB	60 dB	50 dB	
VSWR (max)	1.25:1	1.25:1	1.4:1	1.5:1	1.6:1	

Please see charts on page 4.

# PART NUMBERING SYSTEM

Connector S: SMA Female **Actuator Voltage** 6: 28 Vdc Latching

7: 15 Vdc Latching 8: 12 Vdc Latching 9: 24 Vdc Latching **Actuator Type** 

0: Standard Contacts
C: Indicator Contacts

D: Self Cutoff Only

E: Indicators and Self Cutoff

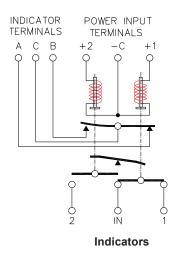

#### **Options**

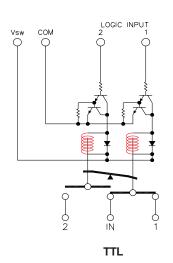

- T: TTL Drivers with Diodes
- D: Transient Suppression Diodes
- R: Positive + Common
- N: Narrow Body
- M: Moisture Seal
- S: 9 Pin D-Sub Connector

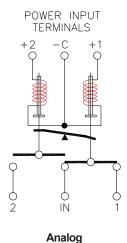

For additional options and custom configurations, contact factory.

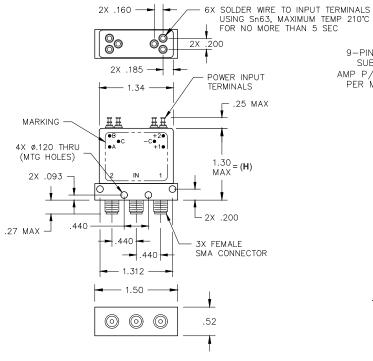

#### **SCHEMATICS AND MECHANICAL OUTLINE**

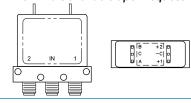

Standard Width Body with Indicators

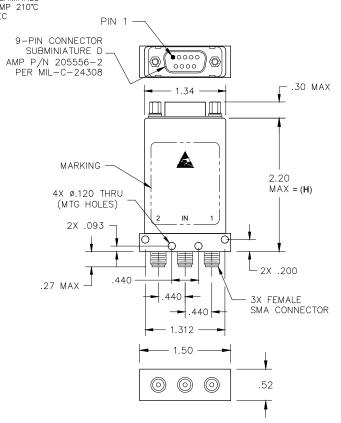

# Pin Terminals available upon request

# Standard Width Body with Indicators, TTL Driver, and D-Sub Connector

#### \*Height (H) will change based on options selected

**H** = 1.30 max for indicator or standard model

H = 1.80 max with Self Cut-off or TTL option

H = 2.20 max with D-Sub Connector and TTL

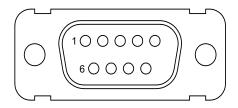

Contact factory for additional model outlines

Miniature DC-18 GHz/DC-22 GHz Latching SPDT Coaxial Switch

# TRUTH TABLES AND ELECTRICAL PINOUT

TRUTH TABLE (with TTL option)						
Logic Input RF Path				Indicator (if applicable)		
1	2	IN to 1	IN to 2		Α	В
0	0	No Cl	No Change			
1	0	On	Off		С	0
0	1	Off	On		0	С
1	1	Forbi	Forbidden			

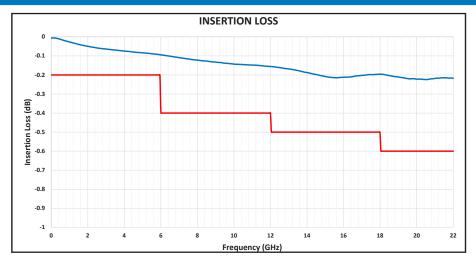

9 PIN D-SUB PINOUT FOR LATCHING SPDT					
OPTIONS					
Pin No.	Standard	Indicator	TTL	TTL + IND	
1	POS 1	POS 1			
2	POS 2	POS 2			
3	COM	COM	COM	COM	
4			TTL 1	TTL 1	
5					
6			Vsw	Vsw	
7		IND 1 (A)		IND 1 (A)	
8		IND 2 (B)		IND 2 (B)	
9		IND COM (C)		IND COM (C)	

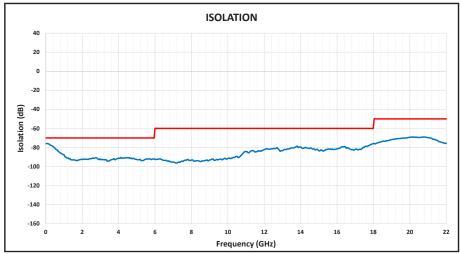

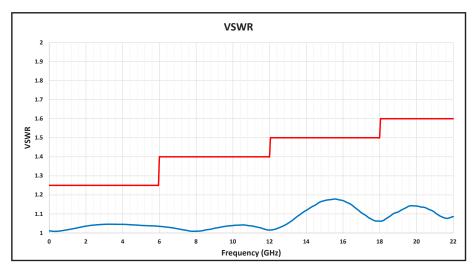

"-S OPTION" 9-PIN D-SUB CONNECTOR (Example: CCR-33S60-S)

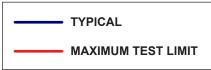

# **PERFORMANCE CURVES**

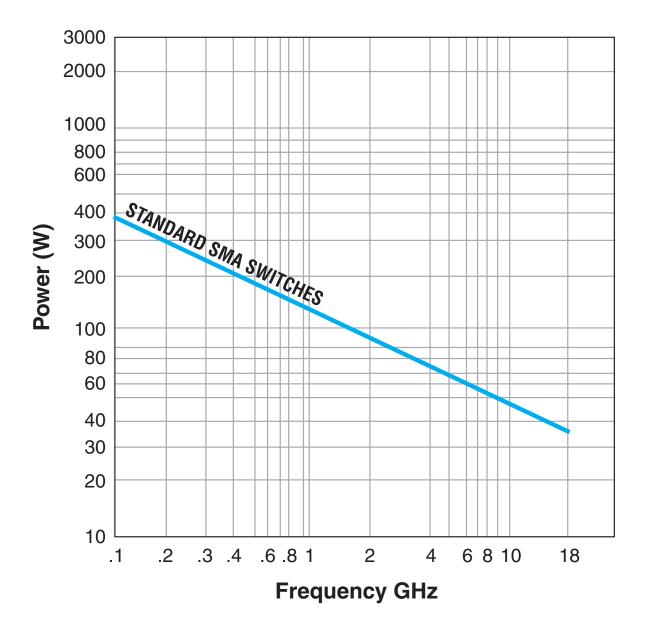

**TYPICAL POWER PERFORMANCE CURVE** 

# Power Handling vs. Frequency

Estimates based on the following reference conditions:

- Ambient temperature of 40°C or less
- · Sea level operation
- · Load VSWR of 1.20:1 maximum
- · No high-power (hot) switching

Please contact Teledyne Coax Switches for derating factors when applications do not meet the foregoing reference conditions.

# Series CCR-33S/CR-33S

Miniature DC-18 GHz/DC-22 GHz Latching SPDT Coaxial Switch

#### **GLOSSARY**

#### **Actuator**

An actuator is the electromechanical mechanism that transfers the RF contacts from one position to another upon DC command.

#### **Arc Suppression Diode**

A diode is connected in parallel with the coil. This diode limits the "reverse EMF spike" generated when the coil de-energizes to 0.7 volts. The diode cathode is connected to the positive side of the coil and the anode is connected to the negative side.

#### **Date Code**

All switches are marked with either a unique serial number or a date code. Date codes are in accordance with MIL-STD-1285 Paragraph 5.2.5 and consist of four digits. The first two digits define the year and the last two digits define the week of the year (YYWW). Thus, 1032 identifies switches that passed through final inspection during the 32nd week of 2010.

### Fail-safe

A fail-safe switch reverts to the default or fail-safe position when actuating voltage is removed. This is realized by a return spring within the drive mechanism. This type of switch requires the continuous application of operating voltage to select and hold any position. (Multi-position switches are normally open with no voltage applied).

# Latching

A latching switch remains in the selected position whether or not voltage is maintained. This can be accomplished with either a magnetic or mechanical latching mechanism.

#### Indicator

Indicators tell the system which position the switch is in. Other names for indicators are telemetry contacts or tell back circuit. Indicators are usually a set of internally mounted DC contacts linked to the actuator. They can be wired to digital input lines, status lights, or interlocks. Unless otherwise specified, the maximum indicator contact rating is 30 Vdc, 50 mA, or 1.5 Watts into a resistive load.

#### **Internal Termination**

Unselected ports are internally terminated to a matched load. The load is  $50\Omega$  resistive device. The max RF power rating is 2 Watts CW. Without the internal termination option, the unselected ports are open circuits.

#### Isolation

Isolation is the measure of the power level at the output connector of an unconnected RF channel as referenced to the power at the input connector. It is specified in dB below the input power level.

#### Self-Cutoff

The self-cutoff option disables the actuator current on completion of actuation. Either a series contact (linked to the actuator) or an IC driver circuit provides the current cutoff. This option results in minimum power consumption by the RF switch. Cutthroat is another name used in the industry for this option. Pulse latching is a term used to describe a switch without this feature.

# **SPDT Switch**

A single-pole-double-throw, has one input and two output ports.

### **Switching Time**

Switching time is the total interval beginning with the arrival of the leading edge of the command pulse at the switch DC input and ending with the completion of the switch transfer, including contact bounce. It consists of three parts: (1) inductive delay in the coil, (2) transfer time of the physical movement of the contacts, and (3) the bounce time of the RF contacts.

# **TTL Switch Driver Option**

As a special option, switch drivers can be provided for both fail-safe and latching switches, which are compatible with industry-standard low-power Schottky TTL circuits.

# Performance Parameters vs Frequency

Generally speaking, the RF performance of coaxial switches is frequency dependent. With increasing frequency, VSWR and insertion loss increase while isolation decreases.

All data sheets specify these three parameters as "worst case" at the highest operating frequency. If the switch is to be used over a narrow frequency band, better performance can be achieved.

#### **Actuator Current vs Temperature**

The resistance of the actuator coil varies as a function of temperature. There is an inverse relationship between the operating temperature of the switch and the actuator drive current. For switches operating at 28 VDC, the approximate actuator drive current at temperature, T, can be calculated using the equation:

$$I_{T} = \frac{I_{A}}{[1 + .00385 (T-20)]}$$

#### Where:

I<sub>T</sub> = Actuator current at temperature, T

I<sub>A</sub> = Room temperature actuator current – see data sheet

T = Temperature of interest in °C

# **Magnetic Sensitivity**

An electromechanical switch can be sensitive to ferrous materials and external magnetic fields. Neighboring ferrous materials should be permitted no closer than 0.5 inches and adjacent external magnetic fields should be limited to a flux density of less than 5 Gauss.
